SuccessNet Plus

Teachers–Personalize Learning
with Learner Settings

|	
Introduction	This guide discusses learner settings on SuccessNet Plus.
Personalize Learning	Pearson curriculum on SuccessNet Plus helps you personalize learning and deliver assessment-based instruction. Some Pearson curricula offer leveled content. The learner setting determines which level of content each student is assigned. Learner-leveling activities automatically modify learner settings, but you can manage learner settings manually as well. Using Writing Coach as an example, notice the dark blue double-*L* icon next to the assessment below. This icon indicates that the activity can modify learner settings.

Examples of learner-leveling activities will vary by curriculum and include pre-tests, readiness assessments, topic or unit tests, and progress-monitoring activities—like this Writing Coach writing assignment. Just look for the double-*L* icon.
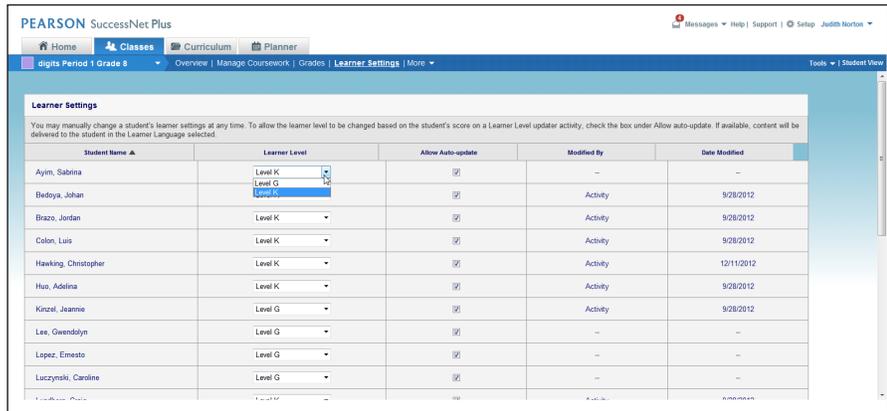

|	
Manage Learner Settings	From your Home page, click **Enter Class** from the classes' dashboard, and then click **Learner Settings**.

You will see your class roster. The roster automatically updates when you add new students to your class.

For most products, the default learner setting is on-level. Click the down arrow to display the levels used, and then click **Save**.

Notice that when you change a learner setting, your name appears in the Modified By column. For the student highlighted below, a learner-leveling activity modified the learner setting. Two dashes indicate that the learner setting remains unchanged from the default level.

Auto-Update	Check the box in the Allow Auto-update column to allow a student's learner level to change automatically based on the student's score on a Learner Level updater activity. This saves you valuable time in personalizing instruction. When the box is unchecked, a student's learner level cannot be modified by his or her score on a Learner Level updater activity.
